```
expression level in yeast than did a wild-type INFrED clone. The encoded polypeptide contained these 2 amino acid substitutions. The introduction of proline residues may assist the polypeptide to adopt a favourable conformation that fixes the neighbouring cysteine residue into the correct orientation for disulfide bond formation, resulting in a higher yield of correctly folded proteins in yeast or mammalian host cells. The invention therefore provides methods of increasing protein expression levels by substituting an amino acid residue with proline, where the substitution occurs within 15 (preferably within 10, and especially within 5) amino acids of a cysteine residue. Note: The present sequence is not shown in the specification but is derived from the TNFrED sequence given in figure 4 (see ABR62363)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            76 SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132

This invention relates to an isolated nucleic acid molecule encoding a human tumour necrosis factor(TNF)-receptor related protein TR2. Included in the hirvention are the two splice variants of TR2, TR2-SV1 and TR2-SV2.

The TR2 gene is located on chromosome 1 at position p36.2-p36.3. TR2 is a member of the TNFR superfamily. The invention includes a method for the treatment of arthritis or inflammation using an antibody directed against a fragment of the TR2 protein. TR2 its agonists and antibody directed against cartisousuppressive, antialeragic, antiathritic, antiashmatic, antiathratic, antiathra
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               76 SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132

The present invention relates to the isolation of a biologically active Apo-2 ligand inhibitor (Apo-2LI) or Apo-3, and the polynucleotide sequences encoding them. Apo-2LI and Apo-3 are involved in apoptosis. The Apo-2LI and Apo-3 polypeptides are useful in diagnostic assays. Apo-2LI is useful for generating antibodies, as standards in assays for Apo-2LI Apo-2LI, in affinity purification techniques, and in competitive-type receptor binding assays when labelled with radioiodine, enzymes or inducing apoptosis in cancer cells, and thus have therapeutic utility. The present sequence represents the extracellular region of a human TNF receptor family protein. This sequence is compared with the extracellular region of human Apo-2LI.
                                                                                                                                                                                                                          Novel isolated biologically active Apo-2 ligand inhibitor polypeptide, or Apo-3 polypeptide which induces or stimulates apoptotic activity, useful in diagnostic assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             68 GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 117

protein comprising a protein whose sequence comprises an immunogenic fragment of the amino acid residues 68-240 of the Human apoptosis inducing molecule II, AIM II, appearing as ADL17690 or a protein whose sequence comprises at least 30 or 50 amino acid residues 68-240, where the fragment comprises at least 30 or 50 amino acid residues 68-240, where the fragment comprises at least 30 or 50 amino acid residues. Also included are a hybridome that produces the antibody, a method of detecting in a biological sample a protein that binds the antibody or its portion, a composition comprising the antibody and a carrier and an isolated cell that produces the antibody. Human AIM II is a member of the tumour necrosis ligand superfamily and has been shown to bind lymphotoxin-beta receptor and TR6 (TRAIL receptor 6). The antibody is useful for preparing a composition for treating e.g., lymphadenopathy, aberrant bone development, autoimmune disease, graft-versus-host disease, rheumatoid arthritis, osteoarthritis or cancer (many other diseases and conditions are listed in the specification). The present sequence represents a cysteine-rich motif from a protein thought to bind AIM II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7 ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to apoptosis inducing molecule II (AIM III), a TNF (tumour necrosis factor)-ligand superfamily member and its corresponding nucleic acid sequence. The invention is useful for preventing, treating, ameliorating, diagnosing or prognosing graft versus host disease, immunodeficiency, cancer, autoimmune diseases such as multiple sclerosis, type I diabetes, rheumatoid arthritis, primary biliary cirrhosis, aplastic ansemia, myelodysplasia, systemic lupus erythematosus and idiopathic thrombocytopenic purpura. It is useful for screening or identifying compounds capable of enhancing or inhibiting cellular response induced by AIM II, for inhibiting, blocking or reducing T-cell activation. AIM II is useful as a molecular weight marker on SDS-PAGE gels or on gel filtration columns. The present sequence is a cysteinerich motif of human TNF receptor (TNFR) family member.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GQVEISSCTVDRDTVCGCRKRQVRHYWSENLFQC-----FNCSLCLN-GTVH----LSCQ 117

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel polynucleotide sequences encoding tumour necrosis factor (TNF) receptor (TNF-R) or TNF binding protein (TNF-BP). The products of the invention are useful in pharmaceutical compositions for prophylaxis or treatment of human tumours and to understand the mechanisms of TNF action. This sequence represents a fragment of the TNF-BP described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16 HXKIGLFCCRGCPAGHYLKAPCTEPCGNSTCLVCPQDTFLAWENHHNSECARCQACDEQA 75

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New ethylene! glycolated polypeptide(s) with improved pharmacokinetic properties - for treating e.g. TNF and IL-1 mediated diseases, e.g. adult respiratory distress syndrome, rheumatoid arthritis, septic shock etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                76 SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 70 GOVEISSCTVDRDTVCGCRKNOYRHYWSENLFOC----FNCSLCLN-GTVH----LSCO 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence shows a native 30 kD TNF inhibitor which may be modified to contain at least one non-native cysteine residue, pref. at positions 1, 14, 105, 111 and/or 165. The non-native cysteine is joined to a non-peptidic polymer, pref. monomethoxy PEG via thio-ether bonds. Two such TNF inhibitor mols may be linked via this non-peptidic spacer. The modified polypeptides show improved pharmokinetic properties, i.e. increased mol. w. hence reduced clearance rate following s.c. or systemic administration, increased sol. of native TNF inhibitors, and reduced antigenicity. The polypeptides may be used for treatment of TNF mediated diseases such as adult respiratory distress syndrome, pulmonary fibrosis, rheumatoid arthritis, inflammatory bowel disease and septic shock. The same method may be applied to the interleukin-1 receptor antigonist IL-1ra. See also AAR27495. (Updated on 25-MAR-2003 to correct

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence is the human soluble tumour necrosis factor receptor (sTNFR). The protein was used to make the truncated sTNFR proteins of the invention. The truncated sTNFR proteins and tumour necrosis factor binding proteins (TNBP) are used to treat any TNF-mediated disease, e.g. arthritis, adult respiratory distress syndrome, cachexia/anorexia, cancer, chronic fatigue syndrome, graft rejection, Alrahemer's diseases and other autoimmune diseases. Cells transformed with a vector containing DNA encoding the protein may be used for production of recombinant sTNFR, which may also be used for measuring the amount of sTNFR; in samples and to raise antibodies against sTNFR. TNPR may also be used in preparation of therapeutic compositions for treating the above diseases. The sTNFR deamidation site in region 111-126, so are more stable in vivo); contain fewer disulphide bonds and fewer epitopes, making them less antigenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 119

The present invention describes a chimeric polypeptide (A1), comprising am nosteoprotegerin (OPG) dimerisation domain fused to a heterologous amino acid sequence. Also described are: (I) a multimer polypeptide comprising covalently associated A1 monomers; (2) an isolated nucleic acid encoding A1; (3) an expression vector comprising the nucleic acid sequence; and (4) a host cell transformed or transfected with the expression vector so that the nucleic acid is expressible. The products from the present invention are useful to treat a variety of disorders tumour necrosis factor (TMF) /OPG and TMF receptor (TMF)/OPG chimeras are used to treat any INF receptor (TMF)/OPG chimeras are used to treat TMF and TMF-mediated disorders such as inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     autoimmune diseases and disorders related to excessive apoptosis. The chimeras are also useful for detecting molecules which interact with fused heterologous sequences to identify potential new receptors and ligands. The present sequence represents the TNF inhibitor 30 kDa protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     70 GOVEISSCTVDRDIVCGCRRNOYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 119

```

```
The present sequence is the protein sequence of the extracellular domain of the p55 tumour necrosis factor receptor (TNFrED). Screening of TNFrED mutant clones using a yeast display system yielded 2 mutant clones (see ABR62364 and ABR62365) that showed higher expression levels in yeast than in wild-type TNFrED. The first clone contained a proline residue that substituted the native Ser-87 residue (position 76 of the present sequence). The other clone contain a proline residue that substituted the native list-37 residue (23 of the present sequence) and also an isoleucine residue that substituted the native Ils-57 residue (46 of the present sequence) of TNFrED. The invention provides methods of increasing protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GQVEISSCTVDRDTVCGCRKNQYRHYWSENLFQC----FNCSLCLN-GTVH----LSCQ 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expression levels by substituting an amino acid residue with proline, where the substitution occurs within 15 (preferably within 10, and especially within 5) amino acids of a cysteine residue. The introduction of proline residues may assist the polypetide to adopt a favourable conformation that fixes the neighbouring cysteine residue into the correct orientation for disulfide bond formation, resulting in a higher yield of correctly folded proteins in yeast or mammalian host cells
                                                                                                                                                                                                                                                                                                                                                                                            Increasing expression of a protein, comprises substituting at least one codon in the polynucleotide encoding the protein, for a codon encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11 HPQNNSICCTKCHKGTYLYNDCPGPGQDTDCRECESGSFTASENHLR-HCLSCSKCRKEM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to Tumour Necrosis Factor (TNF) inhibitors (see AAB37676 and AAB37685), which have TNF inhibitory activity. The novel TNF inhibitors of the present invention are useful as therapeutic agents for inhibiting the activity of TNF and interleukin (IL-1), and for treating inflammatory and degenerative diseases mediated by TNF. The 30 kba TNF inhibitor can inhibit TNF alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel 30 kDa tumor necrosis factor inhibitor analog comprising a non-native cysteine residue cross-linked with polyethylene glycol, useful for treating inflammatory and degenerative diseases mediated by TNF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      76 SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     à
                                                                                                                                                                                                                                                                                                                                                                                                                                                      7
                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human tumour necrosis factor (TNF) inhibitor polypeptides (designated 30kDa TNF inhibitor), and the polynucleotide sequences encoding them. Also disclosed is a fragment of the 30kDa TNF inhibitor polypeptide which comprises at least one non-native cysteine residue at the N-terminus, C-terminus, residue 14 or preferably 105. The polynucleotide sequence encoding the 30kDa TNF inhibitor manufacturing a medicament for treating a pathological condition mediated by TNF. The present sequence represents human 30kDa TNF inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SQVALENCSAVADTRCGCKPGWFVEC -- QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human tumour necrosis factor (TNF) inhibitor polypeptides (designated 30kpa TNF inhibitor and 40kDa TNF inhibitor), and the polynucleotide sequences encoding them. Also disclosed is a fragment of the 30kDa TNF inhibitor polypeptide which comprises at least one non-native cysteine residue at the N-terminus, C-terminus, residue 14 or preferably 105. The polynucleotide sequence encoding the 30kDa TNF inhibitor is useful for manufacturing a medicament for treating a pathological condition mediated by TNF. The present sequence represents human 30kDa TNF inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                76 SQVALENCSAVADTRCGCKPGWFVEC---QVSQCVSSSPFYCQPCLDCGALHRHTRLLCS 132

Patent No. US20020009780A1

GENERAL INFORMATION:
APPLICANT: Dahiyat, Bassil
APPLICANT: Filikov, Anton
TITLE OF INVENTION: DESIGN AND DISCOVERY OF PROTEIN BASED TNF-ALPHA
TITLE OF INVENTION: DESIGN AND DISCOVERY OF PROTEIN BASED TNF-ALPHA
TITLE OF INVENTION: DISCOVERS
TITLE OF INVENTION: DISCOVERS
TITLE OF UNDENTION: DISCOVERS
THE TREATMENT APPLICATION NUMBER: US 60/186,427
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20.3%; Score 210.5; DB 14; Length 162; 30.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 12,

ZIP: 22202
COMPUTER: EDADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/219,237B
FILING DATE: 28-MAR-1994
CLASSIFICATION 1435
PRIOR APPLICATION NUMBER: US/07/872,129
FILING APPLICATION NUMBER: US/07/872,129
FILING APPLICATION NUMBER: US/07/872,129

Pypothetical protein Rv2132 - Mycobacterium tuberculosis (strain H37RV)

C;Species: Mycobacterium tuberculosis

C;Species: Mycobacterium tuberculosis

C;Accession: H70576

R;Cole, S.T.; Brosch, R.; Parkhill, J.; Garnier, T.; Churcher, C.; Harris, D.; Gordon, S.; Connor, R.; Davies, R.; Devlin, K.; Feltwell, T.; Gentles, S.; Hamin, N.; Holroyd, S.; Rajandream, M.A.; Rogers, J.; Rutter, S.; Seeger, K.; Skelton, S.; Squares, S. Nature 393, 537-544, 1998

R;Authors: Sqares, R.; Sulston, J.E.; Taylor, K.; Whitehead, S.; Barrell, B.G.

Submitted (JAN-2001) to the EMBL/GenBank/DDBJ databases.
-- FUNCTION: Sigma factors are initiation factors that promote the attachment of RNA polymerase to specific initiation sites and are then released (By similarity).
-- SIMILARITY: Belongs to the sigma-70 factor family.

Submitted (SEP-2003) to the EMBL/GenBank/DDBJ databases.

Li Submitted (SEP-2003) to the EMBL/GenBank/DDBJ databases.

I FUNCTION: Signa factors are initiation factors that promote the attachment of RNA polymerase to specific initiation sites and are then released (By similarity).

Li SIMILARITY: Belongs to the sigma-70 factor family.

Novel isolated Apo-2DcR polypeptide useful for modulating apoptosis in

Disclosure; Page 37; 58pp; English

The present invention relates to the isolation of novel human polypeptides, designated Apo-2DCR, and the polynucleotide sequences encoding them. Apo-2DCR is capable of binding Apo-2 ligand and is useful for modulating programmed cell death or apoptosis in mammalian cells. Apo-2DCR can be used to produce apo-2DCR antibodies which are useful therapeutically, and can cross-react with other receptors for Apo-2 ligand to block excessive apoptosis in neurodegenerative diseases, or to block potentially autoimmune or inflammatory effects. Apo-2DCR antibodies are also useful in immunohistochemistry staining assays or diagnostic assays for Apo-2DCR, e.g. detecting it's expression in specific cells, tissues or serum, and for the affinity purification of Apo-2DCR from recombinant cell culture or natural sources. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides novel Apo-2 protein and the nucleic acid encoding the protein. The invention is useful in inducing apoptosis in mammalian cancer cells. The invention is also useful in diagnostic procedures for tissue-specific typing and in generating transgenic animals that are useful in development and screening of reagents. The invention is also useful in development protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides novel Apo-2 polypeptide and the encoding polynucleotide capable of modulating apoptosis. The invention is useful in diagnosing, treating and preventing cancer, tissue typing, in generating antibodies and transgenic animals. The invention is also useful in gene therapy. The present sequence is human Apo-3/DR3 protein. This sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New Apo-2 polypeptides and encoding nucleic acid molecules, useful for diagnosing, preventing or treating cancer, and in tissue typing or in generating antibodies or transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 VMDAVPARRWKEFVRTLGLREAEIEAVEVEIGRFRDQQYEMLKRWRQQQPAGLGAVYAAL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ଚ
                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel human adriamycin-inducible killer protein located on chromosome 8p21, which also has p53-inducible, apoptosis-mediating activity and comprises an amino-terminal extracellular receptor, transmembrane and death domains. The nucleic acid molecule which encodes the protein, it's encoded signal transduction protein and antibodies of the invention are useful in the diagnosis and treatment of neoplastic diseases. The invention is also useful for the
                                                                                                                                                                                                                                                                                                                                       A new nucleic acid encodes a p53-induced protein (Killer) - which induces apoptosis and is useful in the diagnosis and treatment of neoplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             68

The present sequence is the death domain of DR3. It was used for comparison to a domain of a novel human tumour necrosis factor receptor, designated TR9. The TR9 receptor is also known as Death Domain Containing Receptor 6. TR9 polypeptides, polymucleotides or agonists are useful for treating, preventing or diagnosing common variable immunodeficiency, X-linked agammaglobulinaemia, severe combined immunodeficiency and Wiskott-Aldrich syndrome, autoimmune diseases (such as rheumatoid arthritis, allergic encephalomyelitis, multiple sclerosis, diabetes mellitus and asthmal, HIV infection, epilepsy, cancer, cardiovascular diseases and other neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid molecule encoding a human tumor necrosis factor receptor, known as TR9, useful for treating, preventing and diagnosing severe combined immunodeficiency, autoimmune diseases, HIV infection, epilepsy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptides, designated App-2DCR, and the polymucleotide sequences encoding them. App-2DCR is capable of binding App-2 ligand and is useful for modulating programmed cell death or apoptosis in mammalian cells. App-2DCR can be used to produce app-2DCR antibodies which are useful therapeutically, and can cross-react with other receptors for App-2 ligand to block excessive apoptosis in neurodegenerative diseases, or to block potentially autoimmune or inflammatory effects. App-2DCR antibodies are also useful in immunohistochemistry staining assays or diagnostic assays for App-2DCR, e.g. detecting it's expression in specific cells, tissues or serum, and for the affinity purification of App-2DCR from recombinant cell culture or natural sources. The present sequence represents a protein of unknown function relating to the present invention. Note: The present sequence is given in the Seq listing but is not mentioned elsewhere in the specification

The present invention relates to the isolation of a biologically active Apo-2 ligand inhibitor (Apo-2LI) or Apo-3, and the polynucleotide sequences encoding them. Apo-2LI and Apo-3 are involved in apoptosis. The Apo-2LI and Apo-1 peptides are useful in diagnostic assays. Apo-2LI is useful for generating antibodies, as standards in assays for Apo-3 or Apo-2LI in affinity purification techniques, and in competitive-type receptor binding assays when labelled with radioiodine, enzymes or fluorophores. Agonistic Apo-3 antibodies are useful for stimulating or inducing apoptosis in cancer cells, and thus have therapeutic utility. The present sequence represents the death domain of a human TNF receptor family protein. This sequence is compared with the death domain of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ñ
                                                                                                                                                                                                                                                                                                                                                Novel isolated biologically active Apo-2 ligand inhibitor polypeptide, or
Apo-3 polypeptide which induces or stimulates apoptotic activity, useful

                                                                                                                                                                                                                                                                                  The present invention provides novel Apo-2 protein and the nucleic acid encoding the protein. The invention is useful in inducing apoptosis in mammalian cancer cells. The invention is also useful in diagnostic procedures for tissue-specific typing and in generating transgenic animals that are useful in development and screening of reagents. The invention is also useful in gene therapy. The present sequence is TNPRI (tumour necrosis factor receptor 1) death domain protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides novel Apo-2 polypeptide and the encoding

protein located on chromosome 8p21, which also has p53-inducible, apoptosis-meditaring activity and comprises an amino-terminal extracellular receptor, transmembrane and death domains. The nucleic acid molecule which encodes the protein, it's encoded signal transduction protein and antibodies of the invention are useful in the diagnosis and treatment of neoplastic diseases. The invention is also useful for the production of animal model systems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A new nucleic acid encodes a p53-induced protein (Killer) - which induces apoptosis and is useful in the diagnosis and treatment of neoplastic

                          7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to prytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, mematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or resamment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                            Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodilatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.

It was used for comparison to a domain of a novel human tumour necrosis factor receptor, designated TR9. The TR9 receptor is also known as Death Domain Containing Receptor 6. TR9 polypeptides, polynucleotides or agonists are useful for treating, preventing or diagnosing common variable immunodeficiency, X-linked agammaglobulinaemia, severe combined immunodeficiency and Wiskottlaric syndrome, autoimmune diseases (such as rheumatoid arthritis, allergic encephalomyelitis, multiple sclerosis, diabetes mellitus and asthmal, HIV infection, epilepsy, cancer, cardiovascular diseases and other neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       65
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid molecule encoding a human tumor necrosis factor receptor, known as TR9, useful for treating, preventing and diagnosing severe combined immunodeficiency, autoimmune diseases, HIV infection, epilepsy
Human; tumour necrosis factor; TNF; TR9 receptor; immunosuppressive; antiinflammatory; cardiant; antiasthmatic; antidiabetic; antiallergic; antiathritic; antirheumatic; anti-HIV; anticonvulsant; cytostatic; neuroprotective; gene therapy; Death Domain Containing Receptor 6; common variable immunodeficiency; X-linked agammaglobulinaemia; severe combined immunodeficiency; Wiskott-Aldrich syndrome; autoimmune disease; rheumatoid arthritis; allergic encephalomyelitis; multiple sclerosis; diabetes mellitus; asthma; epilepsy; cancer; cardiovascular disease; neurological disease; protein coordinate data;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RWKEFVRTLGLREAEIEAVEVEIGR-FRDQQYEMLKRWRQ--OQPAGLGAVYAALERMGL

The death domain (DD) of human Fas-ligand receptor (FAS-R), ankyrin 1, nerve growth factor receptor (NGF-R) and MORT-1 (which binds to the intracellular portion of (FAS-R)) are also given (see AAW00206-07 and AAW00209-W00210). These DDs are used to identify compounds capable of modulating activity of the regulatory proteins (p55, NGF, TNF and FAS-R ligand, MORT-1) vai interaction with the DDs. Such modulators which may be antibodies, antisense sequences or ribozymes (which can affect the cellular mRNA sequences encoding the proteins) and care useful for modulation of effects of the regulatory proteins and the cell. Tumour cells, HIV-infected cells or other diseased cells can be treated by targeting the cells with animal viral vectors encoding the modulators and a viral surface antigen capable of binding to a specific receptor. The DDs are characterised by having groups of common maino acid residues Trp, Ala, Asp, Glu, Thr, Arg and Tyr within locations that can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Modulator of regulatory cellular events mediated by "death domain" contragulatory proteins - useful for modulating functions mediated in cells by proteins contg the death domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a new isolated polypeptide comprising: a polypeptide or its mature form comprising a sequence not given in the specification; or a variant of (A), where one or more amino acid residues in the variant differs in no more than 15% from the amino acid sequence of the mature form. The pharmaceutical composition may be administered via oral, transdermal, rectal or parenteral route. The polypeptide, nucleic acid or antibody is useful for preparing a composition for treating or preventing a NOVX-associated disorder, e.g., cancer. This is the amino acid sequence of a protein associated with analysis of domains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      6 LLDDPLGRDWRRLARKLGLSEEEDQIEHENPRLASPTYQLLDIWEQRGGKNATVGTLLE 65

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
